Bengaluru, India

Computer Science undergraduate at **Scaler School of Technology (degree awarded by BITS Pilani)** focused on front-end web development, responsive CSS architecture, and foundational programming in Java. Passionate about learning by building practical, accessible projects from first principles.

EDUCATION

Scaler School of Technology (Degree awarded by BITS Pilani)

2026 – 2029

B.Tech in Computer Science · Bengaluru, India

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), Web Development & Architecture, Database Management.

PROJECTS

Flexbox Quest — Interactive Game Layout Engine

2026

[HTML5 Semantic](#) · [CSS3 Flexbox](#) · [Responsive Design](#) · [Spatial Mechanics](#)

- Designed and developed a game-inspired spatial interface showcasing advanced CSS Flexbox mechanics, multi-axis alignments, responsive wrapping, and interactive HUD status boards.
- Engineered zero-runtime layout calculations using pure modern CSS properties (`justify-content: space-between`, `align-items: center`, dynamic clamping) with zero JavaScript dependencies.

Student Portal — Academic Records & Course Registration System

2026

[HTML5 Semantic](#) · [CSS Grid & Tables](#) · [Form Validation](#) · [Accessible Controls](#)

- Built an academic dashboard featuring student profiles, responsive tabular schedule layouts, and structured course registration workflows with high-contrast accessibility standards.
- Implemented accessible form inputs, select options, and semantic structure guaranteeing readability across all screen sizes.

Aura — Spatial Perspective Monograph & CSS Component Lab

2026

[HTML5 Semantic](#) · [CSS3 3D Preserves](#) · [CSS Keyframes](#) · [Zero JS Runtime](#)

- Developed an editorial developer portfolio showcasing 3D spatial gyro-armillary mechanics, rotating crystal cubes, and kinetic card fans powered strictly by native CSS3.
- Achieved instant first paint, responsive mobile-first navigation drawer, and 100% lighthouse compliance with zero external framework dependencies.

Core Java Problem Solving & OOP Foundations

2026

[Java \(JDK 21\)](#) · [Object-Oriented Programming](#) · [Algorithmic Logic](#)

- Developed object-oriented programs and algorithmic problem solutions as part of Scaler School of Technology coursework, strengthening modular programming and logic building.

TECHNICAL COMPETENCIES

Languages:	Java, HTML5, CSS3, SQL (Foundational)
Frontend & Styling:	CSS Flexbox, CSS Grid, 3D CSS Perspective, Responsive Design, Semantic HTML, CSS Box Model
Concepts:	Object-Oriented Programming (OOP), Web Accessibility (a11y), Mobile-First Layouts
Tools & Workflow:	Git, GitHub, GitHub Pages, VS Code, Chrome DevTools
